Examiner's Amendment

Response to Office Action Mailed 2/16/2005
Amendment dated May 12, 2005
Serial No. 10/621642
VOL 047 P2

29. (Previously Presented) The motor system according to claim 21, wherein the rotational speed is evaluated by calculation in a manner such that a difference between the flux speed and an assumed rotor speed or variables derived therefrom is formed as a rotational speed correction term (11) and the actual rotational speed is evaluated by way of an approximation process.

30. (Previously Presented) The motor system according to claim 29, wherein said rotational speed correction term (11) is corrected by way of a rotational speed measurement.

31. (Previously Presented) The motor system according to claim 21, wherein the assumed rotor rotational speed by way of a rotational speed correction term (11) is adapted in an adapter block to the actual [current] rotational speed.

32. (Previously Presented) The motor system according to claim 21, wherein the assumed rotational speed by way of a rotational speed correction term (11) is adapted in a rotational speed model to the actual rotational speed.

33. (Previously Presented) The motor system according to claim 33, wherein for evaluating the flux speed one determines the position of the magnetic flux and specifically by way of the equation

Equation (5) $\rho = \frac{1}{\rho} \cdot \text{Arctg} \left(\frac{\psi m \beta}{\psi m \alpha} \right)$

34. (Previously Presented) The motor system according to claim 21, wherein the equation (5) is differentiated with respect to time and the equations (3a) and (4a) (for calculated evaluation of the rotational speed) are substituted into the differentiated equation (5).
